2-(1-Benzyl-1*H*-indol-3-ylmethylene)-1-azabicyclo[2.2.2]octan-3-one

The title compound, $C_{23}H_{22}N_2O$, was obtained in a condensation reaction of 1-benzyl-1H-indole-3-carboxaldehyde with 1-aza-bicyclo[2.2.2]octan-3-one. The crystal structure indicates the presence of a double bond, connecting an azabicyclic ring system to an indole-3-carboxaldehyde.

Comment

Indole derivatives have been found to exhibit a wide range of biological activity. Pyrido[1,2-a]indole derivatives have been identified as potent inhibitors of human immunodeficiency virus type 1 (Taylor et al., 1999), and 5-chloro-3-(phenylsulfonyl)indole-2-carboxamide is reported to be a highly potent non-nucleoside inhibitor of HIV-1 reverse transcriptase (Williams et al., 1993). Indole derivatives also exhibit antitumor activities (Andreani et al., 2001; Bradlow et al., 1999; Cirrincione et al., 1999; Tiwari et al., 1994; Dashwood et al., 1994). Recently tryptamines have been found to be polyamine site antagonists at the N-methyl-D-asparatate receptor (Worthen et al., 2001). As part of our synthetic strategy to obtain rigid analogs of tryptamine, we synthesized a series of 2-(1-substituted-1*H*-indol-3-ylmethylene)-1-aza-bicyclo[2.2.2] octan-3-ones. It was observed that, when 1-substituted indole-3-carboxaldehyes were condensed with 1-aza-bicyclo[2.2.2]octan-3-one, different ratios of E/Z isomeric products were obtained, depending on the nature of the indolic N-substituent (Tønder et al., 2000). In the case of an indolic N-methyl substituent, the Z isomer is the major product, although a small amount of the E isomer is obtained (Chapman et al., 1986), whereas bulkier N-substituted indole carboxaldehydes favor formation of the Z isomer.

The X-ray structure analysis of the title compound (I) was carried out in order to obtain detailed information about the solid state stereochemistry and conformation of products resulting from condensation of indole carboxaldehydes with bulky N-substituents with 1-aza-bicyclo[2.2.2]-octan-3-one. The structure of (I) is illustrated in Fig. 1 and selected bond distances and angles are given in Table 1. It can be seen that the benzyl group is oriented away from the azabicyclo[2.2.2]octanone moiety by torsions of -101.0 (2)° (C2-

N1—C19—C20) and -155.3 (2)° (N1—C19—C20—C21). This conformation is stabilized by pairing of the benzyl groups of inversion-related molecules (Fig. 2) and a C—H···O interaction (Table 2). As expected, the linkage between the indolyl and azabicyclo[2.2.2]octanone moieties is close to planar, forming exclusively the Z isomer [torsion angle C2—C3—C10—C11 is -4.4 (3)°]. This isomer is favored because the alternative E isomer would result in a steric clash between the carbonyl O atom and the hydrogen attached to C2 of the benzyl group.

Experimental

To a stirred solution of diisopropylamine (1.923 g, 19 mmol) in THF (20 ml) at 273 K under nitrogen was added a solution of $2.0\,M$

n-butyllithium (9 ml, 18.8 mmol) and the mixture was stirred at 273 K for 30 min. To this solution at 273 K was added 1-aza-bicyclo[2.2.2]octan-3-one hydrochloride (1.5 g, 9.28 mmol) in one portion and stirring was continued until the mixture completely dissolved (20 min). The temperature was lowered to 195 K and a solution of 1benzyl-1H-indole-3-carboxaldehyde (2.16 g, 9.2 mmol) in THF (25 ml) was added dropwise. Stirring was continued for 30 min at this temperature and then at 273 K for 90 min. The reaction mixture was poured into aqueous saturated NaHCO3 solution at 273 K and the resulting solution extracted with CHCl₃ (3 × 15 ml). The combined organic extracts were dried over anhydrous Na2SO4, filtered, and evaporated to afford a yellow solid. Crystallization from methanol gave yellow crystals suitable for X-ray analysis. ¹H NMR (CDCl₃, p.p.m.): 2.02 (m, 4H), 2.63 (p, J = 3.3 Hz, 1H), 2.98 (m, 2H), 3.13 (m, 2H)2H), 5.38 (s, 2H), 7.11–7.31 (m, 8H), 7.48 (s, 1H), 7.90 (m, 1H), 8.39 (s, 1H). ¹³C NMR (CDCl₃, p.p.m.): 26.8, 40.8, 47.8, 50.9, 110.4, 110.5, 118.2, 119.3, 121.2, 122.8, 126.7, 127.9, 129.0, 134.6, 136.2, 136.7, 140.8, 205.4.
